

Reports are created for a selected period for personal check or additional statistic data. They enable, for example, an overview of amount of toners delivered by the supplier (resp. headquarters), how much you have received, how many units have been issued to which printer at your location, stock at the end of the period and also the difference in the current state. The user can only view *Summary report* for his assigned location. Other reports can only be viewed by a user with assigned authorization *Manager of supplies* and he may use them to make new orders, compare printing efficiency in different locations, and he also has available individual reports of confirmed receptions, issues.
